

BP-Recipe Week 4 Retrospective

Benjamin Matthews, Travis Cripe, Daniel Yune

Tim Borisenko, Jacob Plank

12/9/2020

Last Week (Week 3): Last week we did the aws deployment, as well as adding scaling to the ingredients amounts. We worked on showing the saved ingredients and amounts as 1 serving. Allowing the user to click a plus and minus to scale the number of servings. When the user clicks the edit recipe, the servings button is removed from the user.

This Week: Adding another page that handles note-taking and added storage capability to store this data (the shopping list) to be able to categories shopping list ingredients to a recipe. Also fixing css styling and formatting to create a fluid and consistent flowing visually appealing webpage.

Story Points Completed: 8

What went well: AWS Deployment was successful and the page loads properly on AWS Elastic Beanstalk now. Testing framework went without a hitch and gives a good baseline on setting up future tests with the project.

What did not go well: Some of the fontawesome icons did not work properly since we are on version 4.7. Some of the icons also did not align properly and determined to use to align the spacing in-line.

What can we improve: AWS Deployment is currently on an education account and we do need to move it to the bfapp.org version so we can use that URL. At the very least, it is able to be deployed and run off of AWS EB, just need to get to the right one.
